Intro to Programming

Let's do a quick test! You must answer at least 7 questions correctly to pass this quiz.

[Return to pathway](#)

1. Which of the following variable declarations is valid?

☐ `var hello: Int? = ""`

☐ `String "hello" = hello`

☒ `val hello = "hello"` Correct!

☐ `hello: String = "hello"`

2. It is considered best practice to declare a variable that will not change using `var` instead of `val`.

☐ True Correct!

☐ `total = 1`

☒ `total--` Correct!

☒ `total = total + 1` Correct!

4. In Kotlin, comments can be single or multi-line and are ignored by the compiler.

☒ True Correct!

☐ False

5. Which of the following is not a data type in Kotlin?

☐ `String`

☒ `Decimal` Correct!

☐ `Int`

☐ `Boolean`

6. `Float` also represents a decimal, but is less precise than `Double`.

☒ True Correct!

☐ False

7. In Kotlin, the entrypoint of a program is the ____.

☐ `println()` statement

☐ `val` variable

☒ `main()` function Correct!

☐ `return` statement

8. Which of the following are true about function return values?
Choose as many answers as you see fit.

☒ If a function does not specify a return type, the return type is `Unit`. Correct!

☐ Function parameters are required to have default arguments.

☒ When calling a function with parameters, the values passed in are called arguments. Correct!

☒ Breaking up your code into separate functions makes your code easier to maintain. Correct!

10. With named arguments, you can change the order in which you pass arguments into a function.

☒ True Correct!

☐ False

Results

You scored 10 out of 10. Congratulations! You have passed this quiz.

2.4.20JVMProgram argumentsCopy linkShare codeRun

```
fun main() {  
    // task1 - print  
    println("Use the val keyword when the value doesn't change.")  
    println("Use the var keyword when the value can change.")  
    println("When you define a function, you define the parameters that can be passed to it.")  
    println("When you call a function, you pass arguments for the parameters.")  
  
    // task2 - debugging  
    println("New chat message from a friend.")  
  
    //task3 - debugging  
    var discountPercentage: Int = 0  
    var offer: String = ""  
    val item = "Google Chromecast"
```

Use the val keyword when the value doesn't change.
Use the var keyword when the value can change.
When you define a function, you define the parameters that can be passed to it.
When you call a function, you pass arguments for the parameters.
New chat message from a friend.
Sale - Up to 20% discount on Google Chromecast! Hurry up!
The total party size is: 50
Congratulations for your bonus! You will receive a total of 6000 (additional bonus).
10 + 17 = 27
10 + 7 = 17
